

For the control of injection pain -

VibraJect®

Dental Syringe Attachment

The Kit:

VibraJect® is available with or without rechargeable batteries. Both models use the same autoclavable clip brackets and motor assembly. A Retrofit Kit is available to convert the VibraJect® model to an R3 model with rechargeable batteries.

Why use VibraJect®:

Injections are the #1 fear of dental patients and it has been reported that 55% of all dental emergencies occur during administration of anesthesia. Pain associated with the administration of anesthesia can be greatly reduced or eliminated with VibraJect®.

VibraJect® is effective for all types of injections including intraligamental, palatal and blocks. It is an easy and affordable way to simplify injections and improve the patient's dental experience.

VibraJect® Usage:

VibraJect® requires no special technique or disposable items. The use of a topical anesthetic is not necessary. VibraJect® is attached to a syringe, the battery-operated motor is turned on creating a high frequency vibration of the dental needle. VibraJect® blocks the pain of dental injections based on the Gate Control Theory.

VibraJect® is available with rechargeable batteries or 1.5 volt replacement batteries. Practices doing an average of 40 injections per week will find the VibraJect® with rechargeable batteries the most economical model.

For those who have the VibraJect® with 1.5 volt batteries, a Retrofit Kit is available to convert the kit to rechargeable batteries. The recharging unit is included with this kit.

VibraJect® is proven by clinical study to be as effective as substantially more expensive anesthetic providing devices.

Increase Patient Comfort with VibraJect®

"The number one reason that dental patients avoid making return visits to your dental practice is pain! Especially the pain associated with oral injections. If there was a device that virtually eliminated the pain factor during a dental visit, your bottom line would increase dramatically. Problem solved! The VibraJect® Dental Syringe Attachment from ITL DENTAL virtually eliminates the pain associated with oral injections, and...you don't need special equipment to use it."
